

1. Mount indicator assemblies in the desired location
2. Connect RED wires to +12v through ignition switch so that display will be OFF when engine is not running
Alternatively the RED wire may be connected to a constant 12v source to have the display continually energized
3. Connect the BLACK wires to GROUND in order to energize the GREEN power indicator & enable the alarm circuit modules
4. Connect the individual LED's to the door switches as illustrated

INSTALLATION INSTRUCTIONS

OPEN DOOR DETECTOR WITH AUDIO ALARM & REMOTE OUTPUT
